

Study of Bibtex

Standard deviation is important local descriptor (?).

By performing simultaneous gray level range compression and contrast enhancement on illumination reflection model, one can improve the appearance of an image by designing a frequency domain procedure (2). An image $f(x, y)$ can be expressed as a product of illumination and reflection components (1). This is (5). The microwave imaging is an important field (4).

AQCLBP approach by varsha and tanuja (3).
